8/7/68  
Done

1 July  
Belcomb, Crossin + Bulmer

Arrived 0800 Haw.

Air lines - room at  
Prince Kuhio. 304.

0900 Proceed to Coast Guard  
comm. to clear <sup>Kilauea</sup> point  
work.

1130 arrived Kilauea  
C.G. station - talked to  
C. comm. must arrive  
at H dpt. at 1500 - take  
1 hour to walk up over  
rough area. Informed  
him we would leave by  
0100 which should be  
sufficient time to  
work these small  
colonies of RFB.

1 July

C.O. said he had a RFB  
band taken from a bird  
which drained itself on  
the lighthouse.

<sup>1200</sup>  
Coming back from lighthouse,  
we stopped about 1/2 mi before  
~~the~~ Wilcox mem. Hosp. and  
flushed a heron from edge  
of small irrigation canal.  
Bird appeared uniform  
slate-blue size of Night heron  
but was not. Possibly dark-  
phase Reef Heron ?? Balwin  
seemed to think it had the  
heavy neck of the night  
heron types.

1 July  
Red Footed Booby Colony  
Nilauea Light house

---

Commander informed  
us very dally. Said  
we had to climb over  
the point to get to 2nd  
colony, but this is  
not so. The only 2nd  
colony is a small one  
adjacent to the lighthouse  
and there can be reached  
with from the bottom below  
the comm's. house.

Dear old Doug Hack.  
Instead of packing 500  
RFB bands, he put the  
box of Sooty Tern heads in  
instead bands.

1 July

Wedgetails had either fresh  
eggs or were digging burrows.

RFB had fresh eggs to full  
grown young, but an abundance  
(= a majority of small to  
medium sized chicks).

1 July

Kelanaea

RFB

Ca. 1000 - 1500 on the  
cliff by the light house  
and probably 500  
opposite the cone.
